Math Department Supply List

Every high school student enrolled in a math class will need a calculator. Attached are pictures of the calculators we recommend in the Math Department. Now is a great time to start watching the sales. The TI-30x iis is used in Algebra 1 and Geometry. All courses Algebra 2 and above use a graphing calculator. The department recommends the TI-84 Plus or the TI-84 Plus CE. If you KNOW your child will be entering a science or math heavy major in college, then we suggest, if possible, to go ahead and buy a TI-84 Plus CE. Both these calculators are allowed on the ACT and SAT. There will be a rental program from the Math Department for those who need it. Scientific calculators will rent for \$5 and graphing calculators will be \$20. More information on the rentals will be available from your child's teacher the first week of school.
